## Verge Solutions and Peminic Merge

December 7, 2010 (Mount Pleasant, SC) -- Verge Solutions, LLC announces that the operations of Peminic, Inc. have been merged with its own. The deal creates a Verge Solutions with over 600 hospital clients using solutions for Patient Safety, Regulatory Compliance, Medical Staff Management, Claims Management, Committee Workflow, Patient Relations, Root Cause Analysis, and Peer Review. Terms of the transaction, which the companies completed December 6, were not disclosed.

“Verge Solutions has built its business on great software and even better customer support,” said Jon Piebenga, Managing Partner of Verge Solutions. “Integrating Peminic’s patient safety, claims management, and patient relations solutions into Verge’s software platform will allow us to expand the quality, regulatory and medical staff management services we offer clients.”

Customer service and satisfaction remain the number one priority of the merged company. Combining solutions on one platform allows clients a single contact for all support and customization, in addition to one login access for all software. Further, clients determine if and when they choose to take advantage of the merged solution, which Verge refers to as VSuite. “We understand the complexities of migrating software. Our goal is to offer an integrated product so robust and customizable that clients will clamor for VSuite,” said Piebenga. Full VSuite will be available to all clients beginning December 15, 2010.

### **About Verge Solutions**

Founded in 2001, Verge Solutions was created to integrate and simplify the processes of regulatory compliance, committee meeting management and physician credentialing. With over 23,000 active users in over 350 hospitals nationwide, our clients range from small critical access hospitals to large academic medical centers. Our goal at Verge Solutions is to create the most cost effective solutions to help our clients manage hospital processes more efficiently.

### **About Peminic**

Peminic, Inc. is a leading software provider in the areas of Patient Safety, Patient Relations, and Risk Management. Founded in 2002, Peminic has one of the largest deployments of online Incident Reporting, Patient Relations, and Compliance in the United States.
